Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

- (Currently Amended) A method of quantifying the amount of adsorbate adsorbed on a solid in a chamber comprising:
 - a. contacting the solid with an adsorbate for a period of time;
 - contacting the solid with an inert fluid while ramping the temperature of the solid-resulting <u>chamber</u> in a specified <u>temperature</u> ramp rate with a fixed heat input profile with respect to determined by a blank run of the solid using no adsorbate;
 - measuring the change in temperature of the solid during the contacting with the inert fluid while ramping the temperature in the chamber according to the specified temperature ramp;
 - d. determining a mathematical function, f(t), describing the deviation of the measured changes in temperature over time from the specified temperature ramp rate;
 - e. determining a value of the desorption order, "m", that yields a linear relationship of In[(-d N_A /dt)/ N_A "] vs 1/T where "N_A" is the total moles of adsorbate adsorbed on the solid, "t" is time, "t_p" is the time at which the extremum is observed, and "T" is temperature;
 - f. determining the activation energy for desorption using :

$$-v \cdot m \cdot N_A^{(m-1)} \cdot \exp\left(\frac{-E_d}{RT_p}\right) + \frac{E_d}{RT_p^2} \left[\beta - f'(t)\right] / t_p = 0 \quad (7)$$

when "m" is determined above to be 1, or using

$$-10^{13} \cdot \exp\left(\frac{-E_d}{RT_p}\right) + \frac{E_d}{RT_p^2} [\beta - f'(t)] / t_p$$
 (8)

when "m" is determined above to be other than 1; and

g. determining the quantity of adsorbate adsorbed on the solid using:

U.S. Appln. No. 10/675,890 Reply to Office action of March 22, 2006 Page 3 of 7

$$N_{\mathcal{A}} = \int_{t_1}^{t_2} f(t) \cdot \frac{C_{ps}}{\Delta H} dt \tag{1}$$

where " C_{ps} " is the specific heat of the solid and ΔH is the heat of adsorption of adsorbate "A" which is substantially equal to the activation energy for desorption determined above.

- (Original) The method of Claim 19 wherein steps (a) through (g) are conducted on a plurality of solids.
- (Original) The method of Claim 19 wherein the expression describing the deviation of the measured changes in temperature over time from the specified temperature ramp rate, f(t) is a polynomial described as:

$$f(t) = \sum_{i=0}^{n} a_i \cdot t^i$$

- (Currently Amended) A method of determining at least one surface property of at least one solid or mixture of solids in at least one chamber comprising:
 - a. contacting the solid(s) or mixture(s) of solids in the chamber(s) with an adsorbate for a period of time;
 - b. contacting the solid(s) or mixture(s) of solids with an inert fluid while measuring the change in temperature of the respective solid(s) or mixture(s) of solids using a detector and while concurrently ramping the temperature solid(s) or mixtures of solid(s) at a controlled ramp rate using temperature controllers to a temperature sufficient to desort adsorbed fluid:
 - c. controlling the heating of the samples-solid(s) or mixtures of solid(s) and maintaining the controlled temperature ramp rate using the measured change in temperature of the solid(s) or mixture(s) of solids:

U.S. Appln. No. 10/675,890 Reply to Office action of March 22, 2006

Page 4 of 7

 measuring the power requirements of the temperature controllers during the ramping of the temperature of the solid(s) or mixture of solid(s); and

e. determining at least one surface property of the solid(s) or mixture(s) of solids from the measured power requirements as a function of time.
